Questionnaire API shop & productreviews

Klanten**vertellen** & **Kiyoh**

Introduction
The questionnaire API is a interface that is used to provide the questionnaire within your own platform. With this feature you're allowed to upload the filled in review by the customer via JSON file:

1. Get your questionnaire
2. Upload the completed customer questionnaire

This document describes the functionality on a technical level, such that systems can connect to this interface.

Process Flow
Some use cases are defined for the questionnaire API:

1. Get your questionnaire
2. Upload the completed customer questionnaire

Security
The security for the questionnaire API will be token based. This means an authentication token needs to be provided as a header value in the HTTP request. For the questionnaire api this token is: X-Publication-Api-Token.

Review platform	**baseurl**
Kiyoh	www.kiyoh.com
Klantenvertellen	www.klantenvertellen.nl

GET Questionnaire

URL: https://<baseurl>/v1/publication/question/{locationId}?locale=en&product_code={product_code}

This API will get the locations questions that have been added in the questionnaire. This operation is categorized as an HTTP GET operation.

URL Parameter	Mandatory	Description
locationId	Yes	Go in the dashboard to Invites → Extra options, in the diagram you find the locationId
locale	Optional	Values: en, nl, fi_FI, fr, be, de, hu, bg, ro, hr, ja, es-ES, it, pt-PT, tr, nn-NO, sv-SE, da, pt-BR, pl, sl, zh-CN, ru, el, cs, et, lt, lv, sk
product_code	Optional	Code of the product(s) you want to review (multiple possible, comma separate)
product_invite	Optional	When product_invite is set to 'true' only a product review is requested. When you don't use this parameter the shop and productreview(s) will be retrieved in one questionnaire

Example default:

```
{
    "questions": [
        {
            "questionId": 572293,
